

AVISO URGENTE DE SEGURANÇA

Assunto: Zonas de aprisionamento da mesa EXaCT Targeting™ (pontos de entalamento)

Nome comercial do produto afectado: Mesa EXaCT Targeting

Identificador FSCA: CP-02427

Data de notificação: 2010-10-20

Tipo de acção: Notificação

Informações sobre os aparelhos afectados: Ver lista em anexo.

Descrição do problema:

A fim de reforçar a documentação sobre segurança de utilização já fornecida pela Varian, a Varian pretende, por meio desta carta, facultar um relatório pormenorizado das zonas de aprisionamento (frestas, pontos de entalamento, etc.) na mesa EXaCT Targeting. Esta carta visa alertá-lo/a para a existência de zonas de aprisionamento que foram identificadas nas mesas EXaCT Targeting da Varian, as quais poderão reter, lesando-as, partes das extremidades do corpo do operador ou do doente, afectando, em geral, os dedos, embora também possa entalar as mãos, as pernas, os pés ou os dedos dos pés. Este aviso inclui uma descrição dos problemas, das medidas que o utilizador pode adoptar para os evitar ou atenuar e das medidas que a Varian está a tomar para os resolver.

Tenha em conta que esta carta faculta informação sobre zonas de aprisionamento que são específicas do Sistema EXaCT Targeting. As zonas de aprisionamento identificadas para a mesa Exact são descritas separadamente, na Carta de Notificação sobre Produto CP-02427E (ref. 3).

Fundamentação:

Esta carta visa informá-lo/a sobre a existência de zonas de aprisionamento na mesa EXaCT Targeting, as quais podem lesionar partes das extremidades do corpo do operador ou do doente, tais como os dedos das mãos, as mãos, os dedos dos pés, os pés ou as pernas.

AVISO URGENTE DE SEGURANÇA

Zonas de aprisionamento da mesa EXaCT Targeting (pontos de entalamento)

Definições:

Definição de zona de aprisionamento¹:

“Local acessível sobre ou no EQUIPAMENTO MÉDICO ELÉCTRICO, no SISTEMA MÉDICO ELÉCTRICO ou na vizinhança do equipamento, em que um corpo humano ou uma parte do mesmo se encontram expostos a um PERIGO de aprisionamento, esmagamento, cisalhamento, impacto, corte, enrolamento, arrastamento, perfuração ou abrasão.” (tradução a partir da versão inglesa)

Para efeitos desta carta, as zonas de aprisionamento da mesa EXaCT Targeting designam frestas ou espaços na mesa que, quando combinados com algum movimento da mesa, podem prender e, eventualmente, lesionar alguma parte do corpo humano. Geralmente, trata-se dos dedos da mão, mas poderá também afectar as mãos, os braços, os dedos dos pés, os pés ou as pernas.

Definição de extremidade:

Para efeitos desta carta, entende-se por “extremidade” um dedo da mão, uma mão, um braço, um dedo do pé, um pé ou uma perna. O risco efectivo encontra-se limitado aos dedos das mãos ou às mãos.

Detalhes:

A mesa EXaCT Targeting é um dispositivo mecânico complexo que poderá entalar e lesionar as extremidades do corpo humano, sobretudo os dedos das mãos. A documentação já fornecida pela Varian para esta mesa (ref. 1 e 2) inclui advertências sobre estes riscos e instruções para uma utilização segura da mesa. Além disso, a Varian promoveu, no passado, medidas de atenuação deste problema, levando a cabo uma ampla acção correctiva, destinada a colocar uma guarda de protecção sobre uma zona de aprisionamento específica da mesa Exact que causou diversas lesões em dedos das mãos (nossa referência CP-00019).

Na sequência de notificações recentes sobre novas lesões ocorridas em dedos das mãos, e para reforçar as instruções contidas na documentação sobre segurança de utilização já fornecida pela Varian, a Varian pretende, por meio desta carta, facultar um relatório pormenorizado das zonas de aprisionamento identificadas na mesa EXaCT Targeting. Esta avaliação inclui um estudo de componentes que são específicos do sistema EXaCT Targeting: A avaliação dos componentes adicionais da mesa Exact são apresentados em separado, na Carta de Notificação sobre Produto CP-02427E (ref. 3).

O presente estudo identificou oito zonas de aprisionamento independentes que pertencem especificamente a componentes da mesa EXaCT Targeting e que podem apresentar riscos para o terapeuta, o doente ou o representante da assistência técnica. Para obter informações pormenorizadas, ver o Apêndice A: Figuras e Quadros.

¹ BS EN 60601-1:2006, ponto 3.131

AVISO URGENTE DE SEGURANÇA

Zonas de aprisionamento da mesa EXaCT Targeting (pontos de entalamento)

São feitas as seguintes observações gerais:

- Quando a mesa é usada conforme descrito nos *User and Maintenance Guides* (Guias do Utilizador e da Manutenção da Mesa) (ref. 1 e 2), o risco de lesão é consideravelmente reduzido ou mesmo eliminado.
- Muitas destas zonas de aprisionamento são pequenas aberturas que podem prender apenas a ponta de um dedo da mão. No entanto, algumas zonas de aprisionamento são suficientemente grandes para prender um dedo inteiro, uma mão, um pé ou uma perna.
- Muitas destas zonas de aprisionamento apenas apresentam risco se estiverem duas pessoas a manusear a mesa: uma delas faz mover a mesa, sem se aperceber de que a outra tem uma extremidade inserida numa zona de aprisionamento.
- Certas zonas de aprisionamento só ficam expostas quando a cobertura em fole do pedestal da mesa for removida. O fole é considerado uma protecção contra lesões durante a normal utilização da mesa, pelo que só deverá ser removido para trabalhos de assistência técnica na mesa. Em geral, estas zonas de aprisionamento apenas apresentam risco para os técnicos que realizem trabalhos de assistência na mesa.

Medida recomendada para o utilizador

Durante a utilização da mesa EXaCT Targeting:

- Leia e siga todas as recomendações e instruções de segurança contidas nos *User and Maintenance Guides* fornecidos com a mesa (ref. 1 e 2). Deve prestar-se específica atenção aos capítulos “*Hazard and Safety Precautions*” (Riscos e precauções de segurança).
- Recomenda-se máxima prudência quando duas pessoas estiverem a operar a mesa em simultâneo:
 - Quando outra pessoa fizer mover a mesa, esteja sempre atento/a ao posicionamento das extremidades do corpo das outras pessoas (dedos das mãos, mãos, dedos dos pés, etc.);
 - Quando outra pessoa fizer mover a mesa, esteja sempre atento/a ao posicionamento colocação das extremidades do seu próprio corpo (dedos das mãos, mãos, dedos dos pés, etc.);
- Quando deslocar manualmente o tampo da mesa, mova o topo apenas empurrando ou puxando pelo próprio topo ou pelas respectivas pegas ou guias; não manuseie as estruturas móveis no pedestal.
- Nunca introduza os dedos em orifícios ou em pequenas frestas.
- Mantenha os dedos e as mãos longe das estruturas móveis quando a mesa estiver em movimento.
- Quando outra pessoa fizer mover a mesa, esteja sempre atento/a à colocação das extremidades do corpo do doente (dedos das mãos, mãos, dedos dos pés, etc.);
- Alerta os doentes de modo a que estes agarrem apenas as pegas e guias apropriadas.
- Faça movimentos lentos e cuidadosos; os movimentos rápidos podem aumentar o risco de lesões.
- Não use sapatos abertos, que exponham os dedos dos pés.

AVISO URGENTE DE SEGURANÇA

Zonas de aprisionamento da mesa EXaCT Targeting (pontos de entalamento)

Durante a assistência técnica da mesa EXaCT Targeting:

- A Varian recomenda vivamente que a manutenção da mesa EXaCT Targeting apenas seja realizada por técnicos qualificados que tenham recebido formação adequada sobre manutenção e estejam devidamente autorizados pelo proprietário. Os técnicos de assistência devem seguir todos os procedimentos adequados e adoptar todas as precauções necessárias para garantir que a assistência técnica à mesa é realizada em segurança.
- Leia e siga todas as recomendações e instruções sobre segurança durante a assistência técnica contidas nos *User and Maintenance Guides* fornecidos com a mesa (ref. 1 e 2). Leia e siga, em específica, as instruções sobre a utilização de braçadeiras de segurança, no capítulo “Maintenance” (Manutenção).

Medidas tomadas pela Varian:

- A notificação dos clientes é feita através desta carta de Correção Urgente de Aparelho.
- A Varian distribuirá um sinal de aviso para uma das zonas de aprisionamento identificadas neste relatório; ver Apêndice A, para identificação da referida zona de aprisionamento. Relativamente a todas as outras zonas de aprisionamento, determinouse que a aposição de rotulagem adicional não reduziria significativamente o risco de aprisionamento.

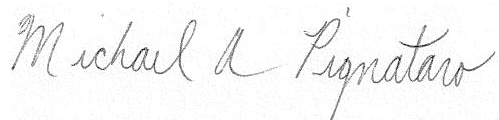

Informe os quadros que trabalham no seu departamento de radioterapia sobre o teor desta carta.

Pedimos desculpas sinceras por quaisquer inconvenientes e agradecemos antecipadamente a sua colaboração. Se precisar de mais esclarecimentos, entre em contacto com o seu Gerente Distrital ou Regional de Atendimento ao Cliente da Varian.

Figura 2

Figura 3

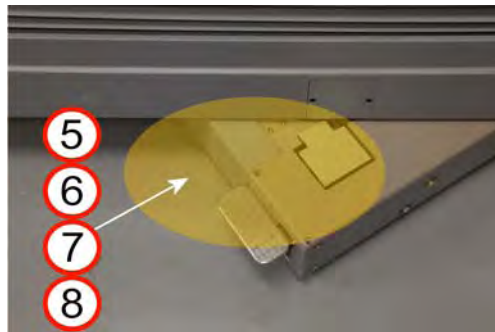

Figura 4

AVISO URGENTE DE SEGURANÇA

Zonas de aprisionamento da mesa EXaCT Targeting (pontos de entalamento)

Quadro 1: Descrição das zonas de aprisionamento

ID	Localização	Parte anatómica em risco	Descrição
1	Figura 1 Pedestal da mesa	Pé ou dedos do pé do terapeuta	Os dedos do pé ou o pé podem ficar presos quando a base do pivot girar na direcção do batente do solo.
2	Figura 1 Pedestal da mesa	Dedos do pé do terapeuta	Os dedos do pé podem ficar presos quando a base do pivot girar na direcção do batente do solo, criando uma força de esmagamento no dedo do pé. Será fornecido um sinal de aviso para esta zona de aprisionamento.
3	Figura 2 Pedestal da mesa	Perna do terapeuta	A perna pode ficar presa quando a base do sistema de elevação girar na direcção da base do pivot. A parte giratória tem tendência para empurrar a perna para fora.
4	Figura 3 Pedestal da mesa	Pé do terapeuta	O pé pode ficar preso quando a base do sistema de elevação girar na direcção do pedal metálico.
5	Figura 4 Pedestal da mesa	Perna do terapeuta	A perna pode ficar presa quando a base do sistema de elevação girar na direcção do pedal metálico.
6, 7, 8	Figura 4 Pedestal da mesa	Dedos da mão do representante da assistência técnica	Os dedos da mão podem ficar presos quando a base do sistema de elevação girar acima da placa de cobertura da base do pivot. Isto poderá ocorrer em três pontos: Nas duas aberturas rectangulares da placa de cobertura e no espaço entre a placa de cobertura e a base. Constitui sobretudo um risco durante os trabalhos de assistência técnica.
